Brain-Based Instructional Approaches for Maximizing Student Learning

Presented by Yo Azama:
ACTFL 2012 Teacher of the Year

When and how does the brain work? How can we train the brain? How can we effectively utilize research findings in the language classroom? In this workshop, the presenter explains what we know about how the brain works, and demonstrates when and how to utilize that information in language instruction. He will share a variety of successful strategies to maintain students’ motivation, develop critical thinking, provide feedback, and help students move toward higher proficiency. Workshop sessions will be highly interactive and provide practical ideas for teachers at all levels.
